

## System Requirement Specifications

Sunville Properties is a Colorado based property consultants who have appointed their agents across Major Cities across the globe. They have sub-companies which take care of the business in different countries and are placed in the countries from where they operate from. The Company currently has been using multiple forms of data storage and want to streamline their working using an application, which can help them seamlessly navigate via different forms of storage. Also the company seeks some insights into the current data and also going further in future. So it has requested specific modules to be introduced in the system.

The Expected modules are :

- 1) A Visual Interface to add the data into each of their tables. A login authentication is mandatory for anyone to be able to modify the data.
- 2) The company needs an order look up (i.e. search) based on the following criteria,
  - a) Order number
  - b) Order Date
  - c) Customer code

kindly note :the company might use either one or all of them together at a time.

3) Generate a report that highlights the balance amounts for all orders in descending order. Do mention the name and code of the agent handling the order. This information needs to be updated in the database .

4) Which is the country with maximum number of registered customer and what is the collective payment amount and outstanding amount for all these customers collectively.

The company needs the following insights

- 1) On selection of the year, system should help them get the following
  - a) The total property area sold vs total property area leased in Sq-M only.
  - b) Of the years 2017,2018,2019- which year got maximum leased area in CA and US countries.

- c) What are the Agent codes of all the agents who have got deals in 'OWNED' categories across the years.
- d) For the city of chillwalk, which agent has got the maximum deals in leased form.
- e) Compare the performance of all agents based on the area leased and owned for the years 2017,2018 and 2019. Who has been the best performer?
- f) What is the amount of property area sold for the month of july for all the years.
- g) The Company seeks a time series analysis report of the orders received.

Company also seeks any interesting insights or patterns that can help make better business decision. Analysts viewpoint is welcomed by sunville properties.

## Technology used

The project is completely build using python.

Libraries used:

- tkinter,tkinter.ttk are used to make a GUI based project.
- tkinter.messagebox is used to show messages to user.
- PIL to insert Image on GUI.
- re library is used for validations of entries.
- pandas library is used to make dataframe which are used to make graphs.
- Library matplotlib is used to plot graphs.
- Module FigureCanvasTkAgg from matplotlib.backends.backend\_tkagg library is used to embed graphs on the GUI.
- Module Table, TableModel from pandastable library is used to show tables on GUI.
- Library pymysql is used to make connections with the sql database.

## Data Provided by the client:

The screenshot shows the phpMyAdmin interface for the 'sales' database. The left sidebar lists the database 'sales (6)' and its tables: agents, balance\_amount, company, customer, employee\_id, and orders. The main panel displays the 'Structure' tab for the 'sales' database, showing a table with 6 tables (agents, balance\_amount, company, customer, employee\_id, orders) and their respective records, types, collations, sizes, and overheads.

Table	Action	Records	Type	Collation	Size	Overhead
agents		12	MyISAM	latin1_swedish_ci	3.4 KiB	44 B
balance_amount		175	MyISAM	latin1_swedish_ci	11.3 KiB	-
company		6	MyISAM	latin1_swedish_ci	2.2 KiB	28 B
customer		25	MyISAM	latin1_swedish_ci	5.9 KiB	112 B
employee_id		3	MyISAM	latin1_swedish_ci	1.1 KiB	-
orders		36	MyISAM	latin1_swedish_ci	2.6 KiB	96 B
6 table(s)	Sum	257	MyISAM	latin1_swedish_ci	26.5 KiB	280 B

The Dataset given contains following columns:

1) Year:2019,2018,2017,2020

2) Month : JUL

3) City

4) Address

5) Prov :BC

6) Country: CA or WS

7) Identifier

8) Area

9) UOM: SQ-M or HA

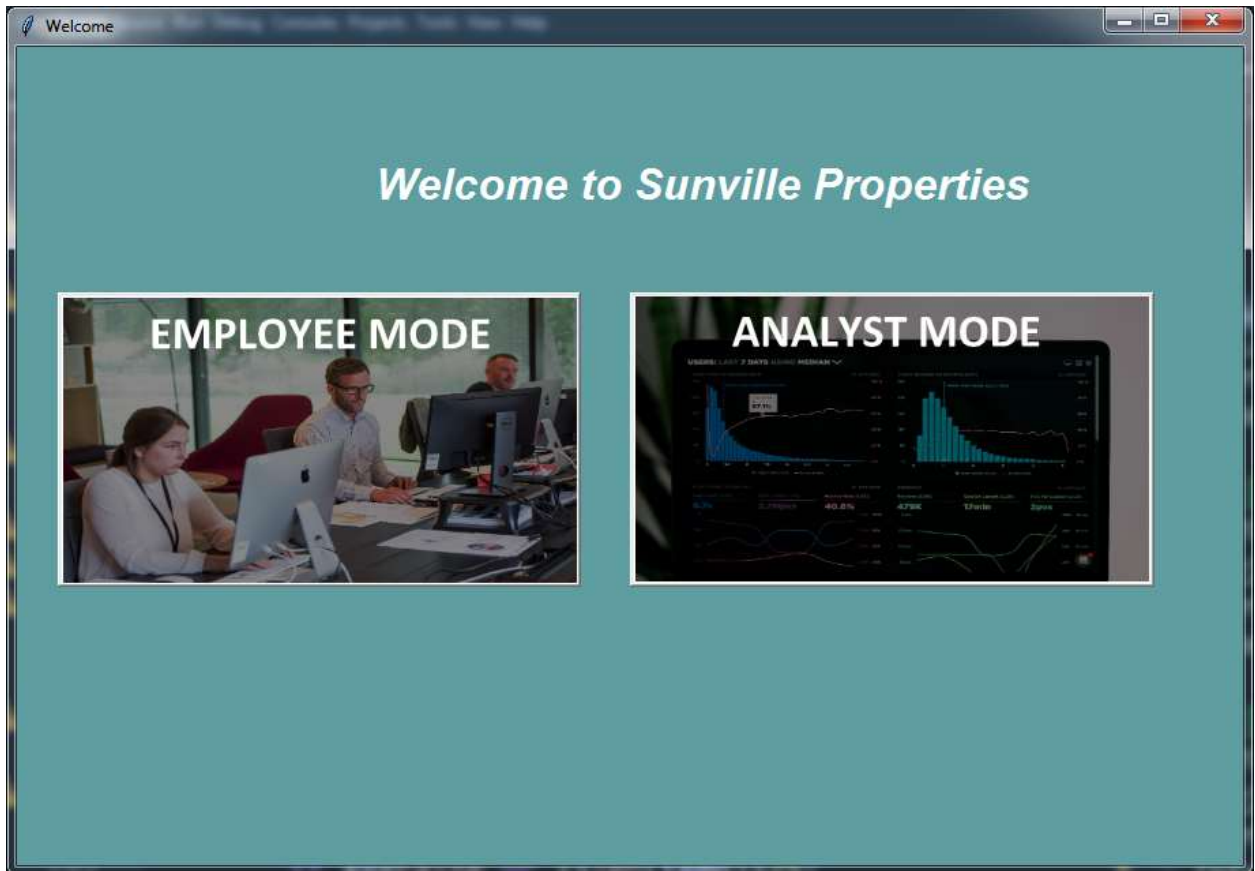

10)Tenure: Owned or Leased

11) Latitude

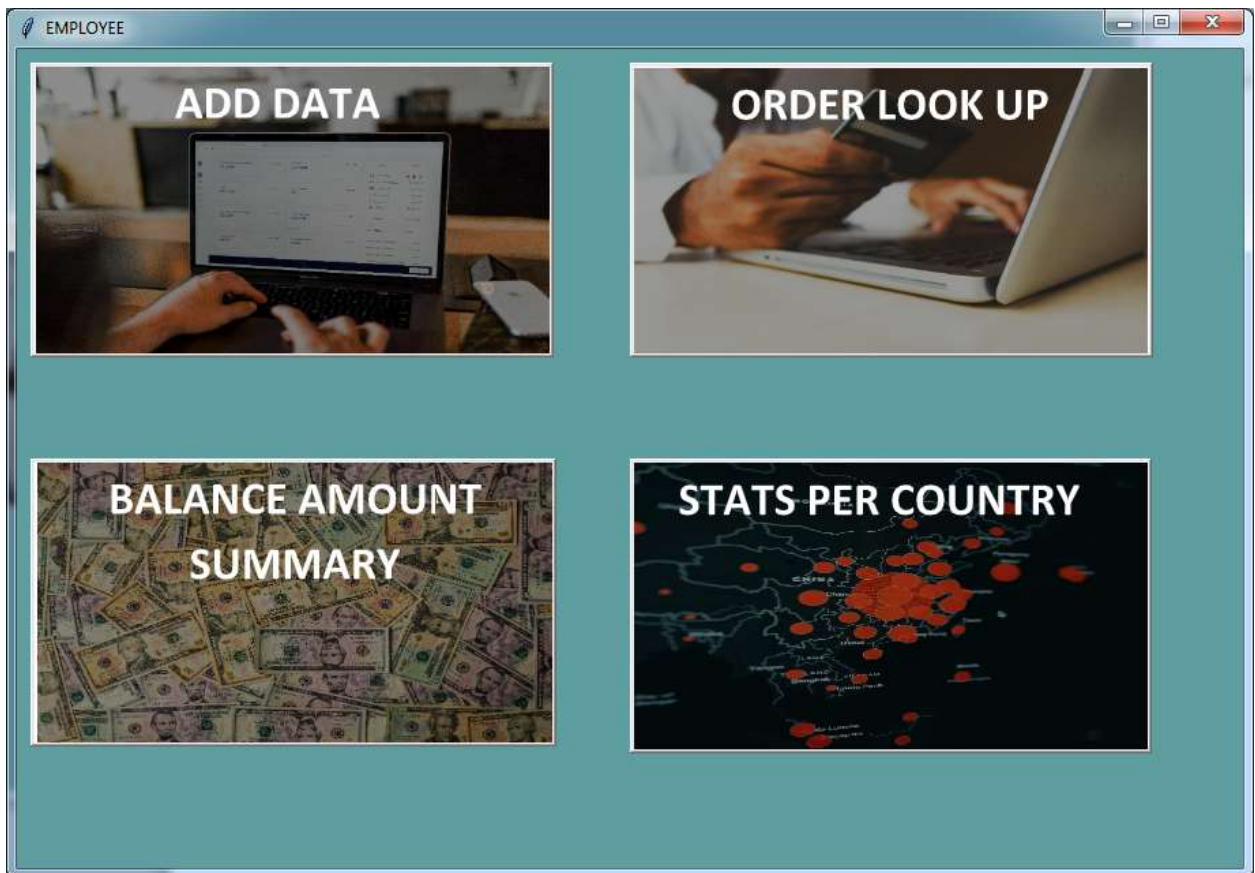

12) Agent

13) Longitude

## Testing:

### Validations:

Name Entry is validated to see if it contains only alphabets and spaces. Length of the string should also be less than 40.

Email entry is validated using regex `re.match(^\.+@(\[?)[a-zA-Z0-9-.\]+\.[a-zA-Z]{2,3}[0-9]{1,3})([?])$)`

User id entry length of the string entered should be less than 30 and more than 0

Password entry length of the string entered should be less than 20 and more than 0

Order number entry is validated using regex `re.fullmatch(r"([0-9]+)")`

Customer code Entry string's 1<sup>st</sup> letter should be C and the rest is validated using regex `re.fullmatch(r"([0-9]+)")`

Agent code Entry string's 1<sup>st</sup> letter should be A and the rest is validated using regex `re.fullmatch(r"([0-9]+)")`

Agent Name entry string should be consist of only alphabets and spaces . Length should be less than 40

Agent Area entry string should be consist of only alphabets and spaces . Length should be less than 35

Agent Commision Entry is validated using `agentcommission.get().isnumeric()` or `agentcommission.get().replace('.', '', 1).isdigit()` and `(len(agentcommission.get())<=10)`

Phone number entries are validated using regex `re.fullmatch(r'^(\d{3}-\d{8})$')`

Country Entries are validated using regex `re.fullmatch('[a-zA-Z\s]+$')`

Company id Entry should only have digits and length should be less than 7

Company name Entry is validated using `(re.fullmatch('[a-zA-Z\s]+$'))`

Company city Entry is validated using `(re.fullmatch('[a-zA-Z\s]+$'))`

Customer Name entry string should be consist of only alphabets and spaces .  
Length should be less than 40

Customer city Entry is validated using `(re.fullmatch('[a-zA-Z\s]+$'))`

Customer entry is validated using regex `re.fullmatch('[a-zA-Z\s]+$')`

Customer country is validated using regex `re.fullmatch('[a-zA-Z\s]+$')`

Amount entries are validated using `open_amount.get().isnumeric()` or  
`open_amount.get().replace('.', '', 1).isdigit())` and `0<(len(open_amount.get()))<13`

Order number entry is validated using `ord_num.get().isnumeric()` and  
`len(ord_num.get())==6`
